DETAILED ACTION

1. Claims 13-24 are pending.
2. The Examiner acknowledges the cancellation of claims 1-12 in the Applicant's Remarks/Arguments filed 20 February 2007.
3. Applicant's amendments and arguments filed 20 February 2007 have been fully considered and they are deemed to be persuasive.

EXAMINER'S AMENDMENT

4. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Mark White (Reg. No. 37,757) on 10 May 2007.

The application has been amended as follows:

13. (Currently Amended) A computer-based software method for creating and modifying a nested data base executed upon a processor with executable instructions, comprising the steps of:

(a) creating a multiplicity of component packets, each of which is further associated with a key and is indexed by a keyed search structure, each such component packet further comprising one or more components, wherein the components further comprise:

Art Unit: 2165

- (i) a plurality of component data records, wherein each component data record further comprises an entry point of the keyed search structure;
- (ii) a plurality of component description records arranged in an array, each component description record further comprising a component identifier which is unique within the component packet's component description records, and which further comprises:
 - (ii1) a size field;
 - (ii2) a logical block number field;
 - (ii3) a component packet offset; and
 - (ii4) a header record, which further comprises a total size field and a number of components field;
- (b) transferring one or more of the component data records from an applications program to the database;
- (c) transferring one or more of the component data records from the database to the applications program;
- (d) adding a new component;
- (e) modifying an existing component by changing the component data record without changing component size;
- (f) modifying an existing component by increasing or decreasing its size; and
- (g) deleting an existing component packet.

Allowable Subject Matter

5. Claims 13-24 have been renumbered as claims 1-12 are allowed over the prior art of record.

Reason for Allowance

6. The following is an examiner's statement for reasons for allowance: The closest prior art of record (Gioelli et al., U.S. Patent No. 6,485,610) does not disclose, teach, or suggest the claimed limitations of (in combination with all other features in this claim), a computer-based software method for creating and modifying a nested data base executed upon a processor with executable instructions, comprising the steps of: (a) creating a multiplicity of component packets, each of which is further associated with a key and is indexed by a keyed search structure, each such component packet further comprising one or more components, wherein the components further comprise: (i) a plurality of component data records, wherein each component data record further comprises an entry point of the keyed search structure; (ii) a plurality of component description records arranged in an array, each component description record further comprising a component identifier which is unique within the component packet's component description records, and which further comprises: (ii1) a size field; (ii2) a logical block number field; (ii3) a component packet offset; and (ii4) a header record, which further comprises a total size field and a number of components field; (b) transferring one or more of the component data records from an applications program to the database; (c) transferring one or more of the component data records

Art Unit: 2165

from the database to the applications program; (d) adding a new component; (e) modifying an existing component by changing the component data record without changing component size; (f) modifying an existing component by increasing or decreasing its size; and (g) deleting an existing component packet.

The dependent claims, being further limiting to the independent claims, definite and enabled by the specification are also allowed.

Any comment considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statements of Reasons for Allowance."
